

# Carbaryl – ESA

## Background

- \* Carbaryl is a carbamate broad spectrum insecticide widely used in agriculture, professional turf management, professional ornamental production, and in the residential lawn and garden markets.
- \* Carbaryl is also registered for use for wide-area pest control and public health programs (e.g., USDA Mormon Cricket and Rangeland Grasshopper Suppression Program).
- \* Crops with relatively high use (e.g.,  $\geq 15$  % of crop acres treated annually, on average) include apples, asparagus, blackberries, cantaloupe, cherries, and eggplant (based on 2005-2014 data).

## Risk Assessment Issues

- \* **Ex. 5 - Deliberative Process**

## Status

- \* Draft Human Health Risk Assessment completed March 2017
- \* Draft BE completed April 2017

- \* **Ex. 5 - Deliberative Process**
